PROFESSIONAL SUMMARY

Backend-Focused Full Stack Engineer with 4+ years of experience engineering high-availability web architectures, scalable APIs, and data-intensive systems. Proven track record of optimizing database throughput and reducing backend latency by up to 30%. Adept at managing AWS cloud infrastructure, automating CI/CD pipelines, and integrating modern web frontends to deliver reliable, business-driven software across InsurTech, E-Commerce, and international development platforms.

TECHNICAL SKILLS

- **Backend & Core Architecture (Primary):** PHP, Laravel Ecosystem, NestJS (Node.js), RESTful Microservices, JWT, OAuth2, Redis Caching, WebSockets, System Architecture
- **Databases & Performance:** MySQL, PostgreSQL, Query Optimization, Database Indexing, Schema Design & Migrations
- **Cloud, DevOps & Hosting:** AWS (EC2 Instance Configuration, S3, Nginx, Route53), Docker Containerization, GitHub Actions (CI/CD Pipelines), Linux/Ubuntu Server Management, Git, Postman, Swagger
- **Frontend & Modern Web (Secondary):** Next.js, React.js, JavaScript (ES6+), TypeScript, Redux Toolkit, Tailwind CSS, Bootstrap
- **AI Integration & Modern Workflows:** AI API Integrations (OpenAI/Anthropic), AI-Assisted Code Optimization (Claude Code), Prompt Engineering

PROFESSIONAL EXPERIENCE

Software Engineer (Backend / Full Stack) — Ideas for Development (IFD)

Dhaka, Bangladesh | Jun 2024 – Present

- Engineered core backend APIs, database architectures, and cloud-hosted portals for enterprise platforms and data collection systems.
- Configured and deployed web services on **AWS EC2** using **Nginx**, managing environment setups, SSL, and server health.
- Designed scalable RESTful endpoints and optimized relational schemas in **MySQL** for high-volume data operations.

- Integrated modern frontend interfaces (**Next.js/React**) with backend microservices, maintaining seamless system communication.
- Implemented backend query optimizations and Redis caching to ensure high availability across low-bandwidth environments.

Software Engineer — Beatnik Technology

Dhaka, Bangladesh | Jan 2020 – May 2024

- Architected high-concurrency backend services and database structures using **Laravel** and **MySQL** for commercial applications.
- Deployed production builds to **AWS EC2** instances, setting up automated CI/CD pipelines via **GitHub Actions** and **Docker**.
- Implemented **Redis caching** and refactored relational database queries, reducing backend API response latency by ~30%.
- Developed RESTful API contracts for frontend web applications built with **Next.js / React**.

FEATURED PROJECTS

Waadaa.Insure — InsurTech Core Engine & Cloud Deployment

Technologies: Laravel, Next.js, MySQL, REST APIs, Redis, AWS (EC2, S3), Nginx

- Designed the core backend engine for automated policy issuance, payment gateway processing, and instant claims workflows.
- Configured production deployment on **AWS EC2** with Nginx web server and SSL configuration.
- Built secure JWT authentication services and scalable RESTful API contracts serving web clients.

Beautiv — E-Commerce & Retail Marketplace

Technologies: Laravel, Next.js, PostgreSQL, Tailwind CSS, Redis, AWS S3

- Engineered multi-vendor relational database schemas, cart transaction flows, and product catalog search APIs.
- Configured **AWS S3** for media/asset storage and optimized database indexing for high-speed API performance.

Showtalent — Content & Digital Community Platform

Technologies: Laravel, Next.js, MySQL, REST APIs, Chakra ui, Redis, AWS (EC2, S3), Nginx

- Developed custom scoring algorithms, digital product sales engines, and role-based permission control modules and configured **AWS S3** for media/asset storage and optimized database indexing for high-speed API performance.
